

Student Name: Richard Hampson

Q1. I used a Trello board to plan out my website and VS code to write the code. My website is aimed at a general audience who want to find out information about a park online.

Q2. I used google to search for YouTube tutorials on how to achieve certain results in CSS. I also used w3 schools and referred to a Udemy course I'd previously attempted.

Q3. While creating my website I was careful not to use any copyrighted images or reveal any private information on the site.

Q4. I'm happy with the tools I used and intend to revisit the project after learning Javascript to work further and add functionality to the site.

Q5. I tested my website in the browser as I was writing the code in VS and also included alt to assist people with disabilities to use the site.

Q6. If I had more time to work on the project I would use containers.

Q7. I believe I completed the brief in the most basic sense. My real issue was not enough time. If I had more time I would include a lot more CSS and improve the appearance of the website (It looks like something from the 90's at the moment!)

Q8. (see screenshots)
